The Fifth International Conference on Fog and Mobile Edge Computing (FMEC 2020)

Conference Paper · April 2020

10 authors, including:

Saleh Imad
Université de Vincennes - Paris 8

Marco Guazzone
Amedeo Avogadro University of Eastern Piedmont

Mohammad Alsmirat
Jordan University of Science and Technology

[Apologies if you got multiple copies of this invitation]

The Fifth International Conference on Fog and Mobile Edge Computing (FMEC 2020)

http://emergingtechnet.org/FMEC2020/index.php

Paris, France. April 20-23, 2020

Technically Co-Sponsored by IEEE France Section

FMEC 2020 CFP:

Cloud computing provides large range of services and virtually unlimited available resources for users. New applications, such as virtual reality and smart building control, have emerged due to the large number of resources and services brought by cloud computing. However, the delay-sensitive applications face the problem of large latency, especially when several smart devices and objects are getting involved in human's life such as the case of smart cities or Internet of Things. Therefore, cloud computing is unable to meet the requirements of low latency, location awareness, and mobility support. To solve this problem, researchers have introduced a trusted and dependable solution through the Fog and the Mobile Edge Computing (FMEC) to put the services and resources of the cloud closer to users, which facilitates the leveraging of available services and resources in the edge networks. By this, we are moving from the core (cloud data centers) to the edge of the network closer to the users. FMEC dependability is based on providing user centric service. The purpose of Fog and the Mobile Edge Computing is to run the heavy real-time applications at the network edge directly using the billions of connected mobile devices.

Several features enable the Fog and the Mobile Edge Computing to be a perfect paradigm to the aforementioned purpose, which are the dense geographical deployment of servers, supporting mobility and the closeness to users. As in every new technology, some challenges face the vision of the Fog and the Mobile Edge Computing, which are the administrative policies and security concerns (i.e. secure data storage, secure computation, network security, data privacy, usage privacy, location privacy, etc).

FMEC 2020 conference aims to investigate the opportunities and requirements for Mobile Edge Computing dominance. In addition, it seeks for novel contributions that help mitigating Mobile Edge Computing challenges. That is, the objective of FMEC 2020 is to provide a forum for scientists, engineers, and researchers to discuss and exchange new ideas, novel results and experience on all aspects of Fog and Mobile Edge Computing (FMEC). FMEC is Technically Co-Sponsored by IEEE Italy Section, IEEE SMC Italian Chapter and Italy Section VT/COM Joint Chapter.

Researchers are encouraged to submit original research contributions in all major areas, which include, but not limited to:

* Mobile Cloud Computing Systems.
* FMEC Security and Privacy Issues.

* FMEC Pricing and billing models.
* FMEC support for VANETS and MANETS
* Cloudlet based computing
* Dew based computing
* Lightweight authentication mechanisms in FMEC architecture.
* Access Control models in FMEC.
* Identification of incentives for FMEC service providers.
* The future perspective for FMEC: Challenges and Open Issues.
* FMEC Quality of Service (QoS) improvements techniques.
* FMEC architecture features and evolution.
* FMEC Real-time communication interfaces and protocols.
* FMEC Resource scheduling that enhances the reliability and scalability.
* FMEC Resources monitoring mechanism and utilization measuring mechanism.
* FMEC resources allocation and management.
* Real-time load prediction model to optimize the user satisfaction.
* FMEC virtualization.
* Data storage, processing, and management at FMEC platform.
* Cyber hacking, next generation fire wall of FMEC.
* Deployment strategies of FMEC Servers
* Admission control for FMEC.
* Social engineering, insider threats, advance spear phishing.
* Incident Handling and Penetration Testing.
* Forensics of Virtual and FMEC Environments.
* Security protocols in FMEC.
* Security and privacy of mobile cloud computing
* Security, privacy and reliability issues of MCC and IoT
* Security and privacy of IoT
* Security and privacy management in MCC
* MCC intrusion detection systems
* Security of pricing and billing for mobile cloud computing services
* Security of mobile, peer-to-peer and pervasive services in clouds
* Security of mobile commerce and mobile Internet of Things
* Security of mobile social networks
* Security and privacy in smartphone devices
* Security and privacy in social applications and networks
* Security of Mobile, peer-to-peer and pervasive services in clouds
* Security of Mobile commerce and mobile internet of things
* Security of Operating system and middleware support for mobile computing
* Security and privacy in sensor networks
* Security and privacy in social applications and networks
* Web service security
* Security of 3G/4G systems, Wi-MAX, Ad-hoc
* Security of Mobile social networks
* Near field communication services
* Service-oriented architectures, service portability, P2P
* Network virtualization and cloud-based radio access networks

Submissions Guidelines and Proceedings

Manuscripts should be prepared in 10-point font using the IEEE 8.5" x 11" two-column format. All papers should be in PDF format, and submitted electronically at Paper Submission Link. A full paper can be up to 8 pages (including all figures, tables and references). Submitted papers must present original unpublished research that is not currently under review for any other conference or journal. Papers not following these guidelines may be rejected without review. Also submissions received after the due date, exceeding length limit, or not appropriately structured may also not be considered. Authors may contact the Program Chair for further information or clarification.

All submissions are peer-reviewed by at least three reviewers. Accepted papers will appear in the FMEC Proceeding, and be published by the IEEE Computer Society Conference Publishing Services and be submitted to IEEE Xplore for inclusion.

Submitted papers must include original work, and must not be under consideration for another conference or journal. Submission of regular papers up to 8 pages and must follow the IEEE paper format. Please include up to 7 keywords, complete postal and e-mail address, and fax and phone numbers of the corresponding author. Authors of accepted papers are expected to present their work at the conference. Submitted papers that are deemed of good quality but that could not be accepted as regular papers will be accepted as short papers. Length of short papers can be between 4 to 6 pages.

Important Dates

Submission Date: 1st December 2019

Notification to Authors: 21st February 2020

Camera Ready Submission: 10th March 2020
