fast, easy deployment

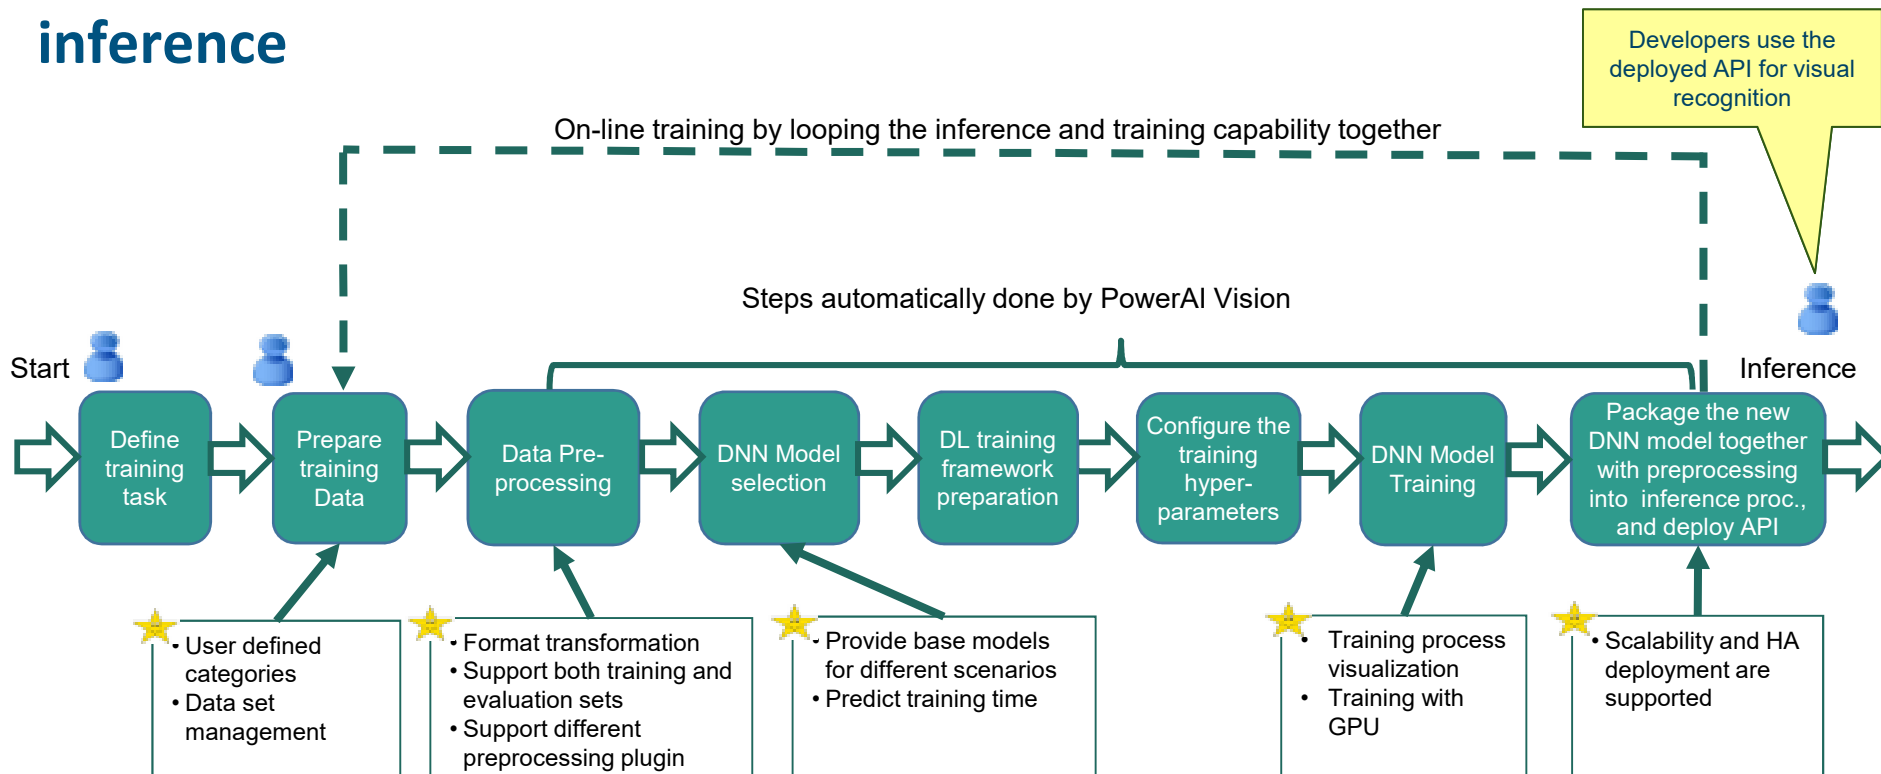

Introducing IBM PowerAI Vision

IBM Power System for HPC, with NVLink

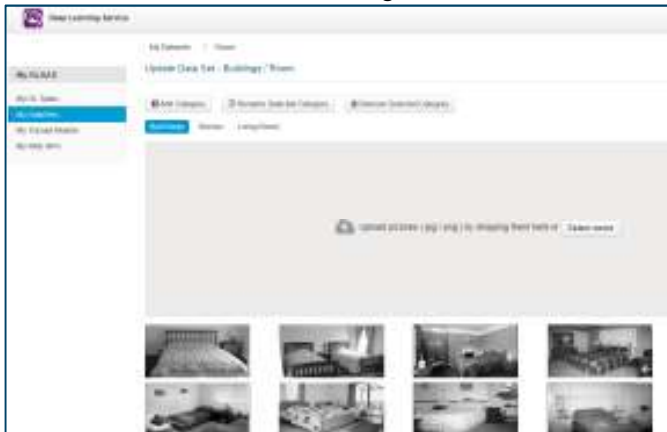

Breakthrough performance for GPU accelerated applications, including Deep Learning and Machine Learning.

Automated processing with tooling for rapid modeling and inference

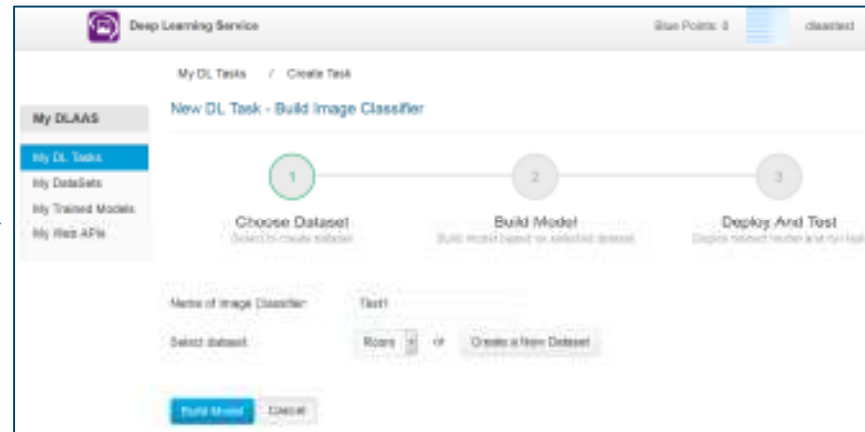

Intuitive interface from data labeling to deploying trained models

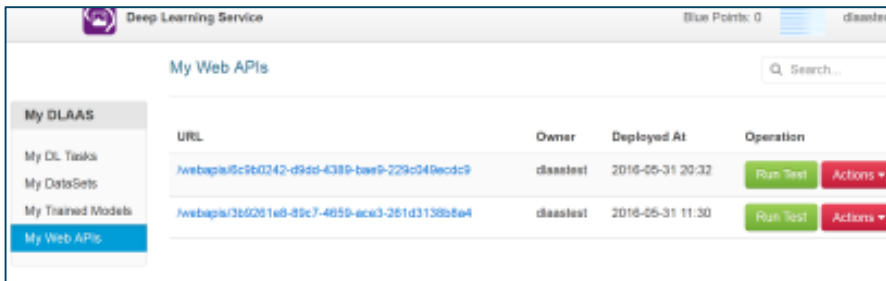

1. User will define the categories and upload data set for new model training

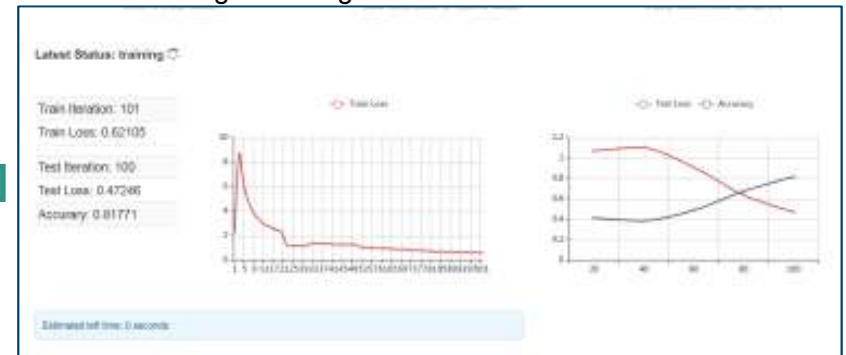

2. Start model training

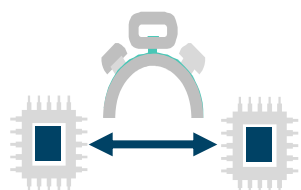

4. Deploy trained model for integration via REST APIS.

3. Dash boarding with insights on time to train and accuracies

Distributed Deep Learning

Near Ideal Scaling to 256 GPUs and Beyond

Performance... Faster Training and Inferencing

PowerAI Rel. 4 with Large Model Support tech. preview

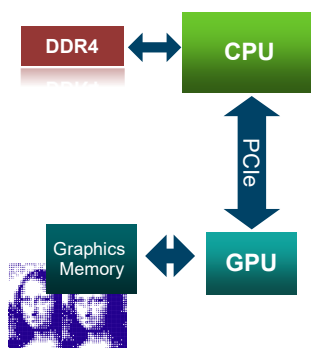

Traditional Model Support

Large Model Support

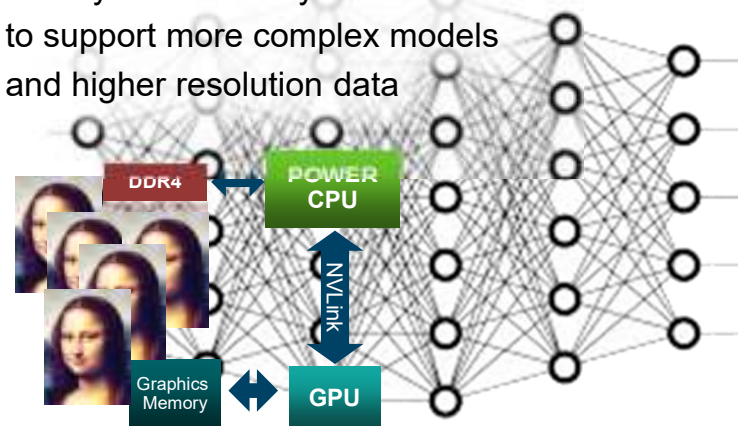

(Competitors)

Limited memory on GPU forces
trade-off in model size / data
resolution

(PowerAI)

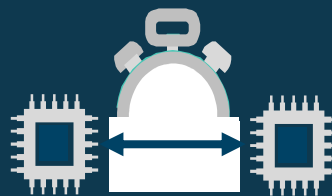

Use system memory and GPU
to support more complex models
and higher resolution data
